Meet Pradeep Negi, a Global Teacher Prize finalist

By | Dec 14, 2017

PTI reports further:

Pradeep Negi, an economics, social science and computer science teacher at Government Inter College BHEL Ranipur in Haridwar, has been shortlisted for the annual Varkey Foundation Global Teacher Prize 2018 from over 30,000 nominations and applications from 173 countries around the world.

A physically challenged Indian teacher from a little-known institution in Uttarakhand beat tough competition from around the world to be named today among the top 50 contenders for a $1 million global award. Mr. Negi was chosen for his fighting spirit, having suffered from bullying at school because of his disability and overcoming his adversities to use new technology tools to make economics and social subjects compelling to students.

"He found the traditional teaching process very difficult – using a blackboard and standing for a long time caused him problems. Now ICT has given him powerful tools for teaching. He frequently uses the internet and online web resources to make economics and social science more interesting. Currently he works in a remote rural area where most students are too poor to afford books and uniform. Many cannot attend regularly because they work part-time to support their families. Pradeep works to help solve the problems of the parents and educate them in the value of schooling for their children.

Pradeep’s practical approach helps his students to evaluate their knowledge creatively. In the school computer lab, his students learn using online tools including interactive quizzes, blogs, Wikis and e-content he has developed with government departments. Pradeep constantly monitors, supervises and evaluates his students, providing extra classes and activity for struggling students. Using their ICT skills his students have launched campaigns to generate awareness on various social issues including saving electricity, saving wildlife, and the importance of voting. They achieve excellent results and many go on to successful careers.

Pradeep has worked with the Education Department to improve the use of ICT in education, so that learning can become interesting and easily accessible in remote areas. He has developed software tools, e-content and data analysis as well as a training program for teachers. He has now trained more than 1200 teachers in his state. In 2014, he was awarded the National Award of ICT by the President of India in New Delhi." ~ Write up on him on the website of Global Teacher Prize.
