

Integers with a double Ganit mala

By [Swati Sircar](#) | Jan 8, 2015

A 'double Ganit mala' is a string with sets of 4 different coloured beads that is used to model the number line. 2 colours are used for the positive part while the remaining 2 colours are used for the negative part. Swati shows you how to use a double ganit mala to introduce your students to the topic of integers.
